what is the extension for sap abap file
test_file.py:1-18
GitHub Copilot
Used 1 reference
The standard extension for SAP ABAP source code files is .abap.
Other related extensions include:
.intf.abap for interfaces
.clas.abap for classes
.prog.abap for programs
For general ABAP code, use .abap.

Step 2: Alternatively, using classic ABAP code to create and insert data:
If you want to define an internal table and work with it in a report program:
Bat
1 REPORT zcreate_employee_table.
2
3 TYPES: BEGIN OF ty_employee,
4 name TYPE c LENGTH 50,
5 salary TYPE p DECIMALS 2,
6 location TYPE c LENGTH 50,
7 END OF ty_employee.
8
9 DATA: it_employees TYPE STANDARD TABLE OF ty_employee,
10 wa_employee TYPE ty_employee.
11
12 * Sample data
13 wa_employee-name = 'John Doe'.
14 wa_employee-salary = '50000.00'.
15 wa_employee-location = 'New York'.
How to create a transportable object?
Can you explain the data types used?

Please add one more column location to the below table script
REPORT zcreate_employee_table.
TYPES: BEGIN OF ty_employee,
name TYPE c LENGTH 50,
salary TYPE p DECIMALS 2,
location TYPE c LENGTH 50,
END OF ty_employee.
DATA: it_employees TYPE STANDARD TABLE OF ty_employee,
wa_employee TYPE ty_employee.
* Sample data
wa_employee-name = 'John Doe'.
wa_employee-salary = '50000.00'.
wa_employee-location = 'New York'.
APPEND wa_employee TO it_employees.
Add a column for email address.
Explain how to modify existing tables.

wa_employee-location = 'Berlin'.
APPEND wa_employee TO it_employees.
* Display data
LOOP AT it_employees INTO wa_employee.
WRITE: / 'Name:', wa_employee-name,
'Salary:', wa_employee-salary,
'Location:', wa_employee-location.
ENDLOOP.
Copilot
It looks like your current table already includes a location column. If you're asking to add one more column named location, that would create a duplicate, which isn't allowed.
However, if you meant to add a different column (perhaps something like department, position, or email), here's an updated version of your script with an additional column called department:
Add a column for email address.
Explain how to modify existing tables.
